We specialise in vertical gardening for both the restaurant and leisure sectors, creating plant species that compliment your interior design. You can transform any interior / exterior wall into an impressive feature and by using the right plant species, they can reflect your brand.

The perfect arrangement of plants can dramatically increase the impact of an arrival experience. Using stunning living displays, they provide an environment that people won't want to leave. They also break up large dining areas, create intimate bar seating areas, dampen sound and visually enhance the look, feel and mood of a room or area.

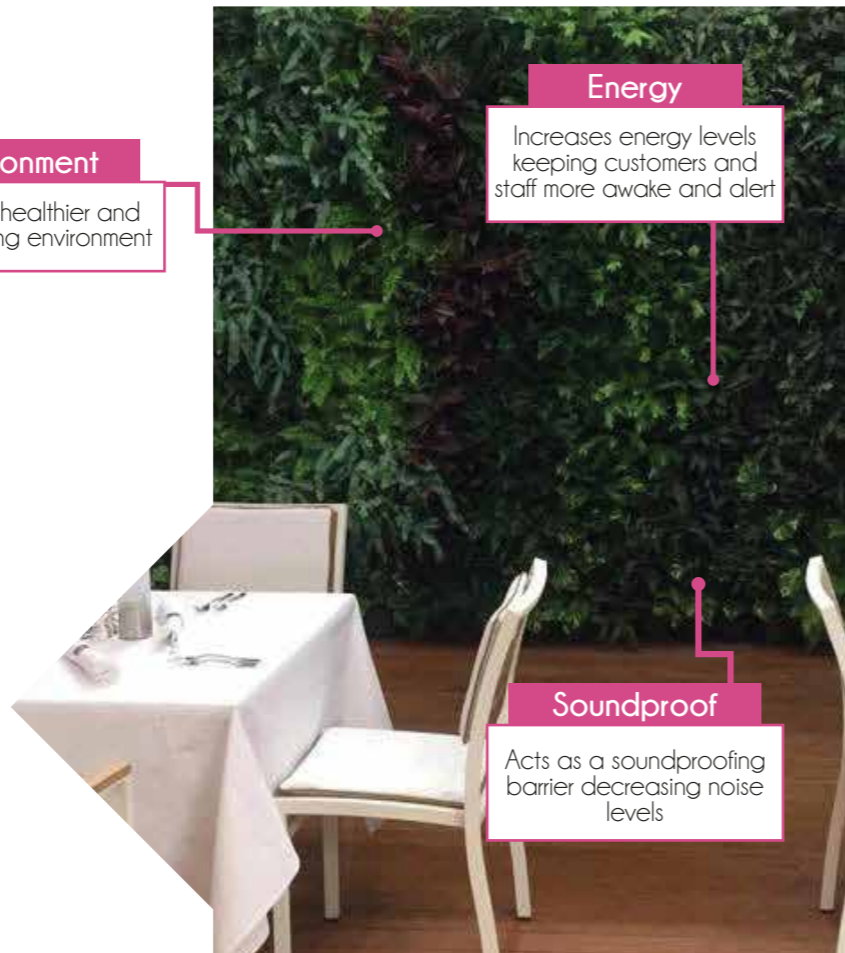

Internal wall benefits

- Improves air quality by taking in carbon dioxide and releasing oxygen
- Reduces absenteeism in the workplace and boosts employee morale
- Reduces dusty environments and lessens airborne particles
- Absorbs indoor fumes including cleaning product and cooking smells
- Cuts down energy costs and regulates temperature
- Decreases the need for humidifiers and dehumidifiers
- Increases energy levels keeping customers and staff more awake and alert

Environment
Creates a healthier and more relaxing environment

Energy
Increases energy levels keeping customers and staff more awake and alert

Soundproof
Acts as a soundproofing barrier decreasing noise levels

Not only do plants enhance the look and feel of a leisure setting, they are also good for business.

Plants in restaurants are proven to increase customer stay time by half an hour resulting in increased spending levels.

Living plants bring real health benefits to both customers and staff such as cleaner air, good levels of humidity, improved well-being, reduced stress levels and better general health.

External wall benefits

- Modern addition to design and architecture
- Insulates the wall in winter months as well as protecting it from the elements
- Cools buildings in the summer months
- Built up areas quieter and more pleasant places to be
- Cleans outside air of pollutants and dust
- Creates habitats for birds and beneficial insects, increasing biodiversity
- Can be used for growing food in urban settings
- Offsets the carbon footprint of people and fuel emissions
- Protects walls from sunlight, acid rain and UV radiation
- Increases property value
- Instant recognition and photo opportunity increasing social media stance

Our planting schemes can be found in many well-known leisure settings, hotels, race courses, offices as well as smaller retail spaces.

The only limit is your **imagination!**
